Kelowna Counterbalance Forklift Training

Kelowna Counterbalance Forklift Training - Counterbalance Forklift Training courses are always in high demand. The Counterbalance forklift is a forklift that is designed with a weight that counters the balance, evenly spreading the load's weight across the arms of the forklift. Counterbalance forklifts are designed so the weight behind the center of gravity is counterbalanced by the weight on the lift. The load is projected out from the front of the equipment so it is visible to the forklift driver. This particular type of forklift truck should just be used on prepared surface or on stable, level ground.

Forklift operators are needed to obtain training that would allow them to better understand the right or proper way across the arms of the forklift. The trainee will learn to correctly lower and raise the load vertically and how to tilt the mast of the lift truck, moving the mast between 5 and 15 degrees both forwards and backwards. Trainees would know the RTITB standards required for safe forklift operation. People training would also become familiar with the kinds of attachments for the arms of the forklift.

Types of Counterbalance Forklifts:

Walkie Pallet Trucks
Walkie Pallet Truck is a counterbalance forklift suitable for getting into spaces which are cramped and small. This lift is really maneuverable and could access virtually any tight spot.

Walkie Stackers
The Walkie Stacker is another forklift which varies a little form the Walkie Pallet truck when it comes to its lift height. This particular machine is designed to access tighter spaces and has extra lift capabilities for high stacking. None of the Walkie line of lifts can be ridden. The driver has to walk behind them.

Rider Pallet Trucks
The Rider Pallet Truck is designed so the driver could ride it. These riding lifts are great for dock loading and unloading.

Wave Work Assist Vehicle
The counterbalance forklift called the Wave Work Assist Vehicle could reach heights as much as 17 feet.

Sit Down Counter Balanced Trucks
Sit Down Counterbalanced Trucks include four-wheel and three-wheel forklift designs. These durable and tough trucks are made to be ridden.
