

Kelowna Wheel Loader Training

Kelowna Wheel Loader Training - The two most common types of heavy equipment training are categorized into the categories of machinery; machinery that is fashioned with tracks and those with rubber tires. The tracked vehicle are heavy duty machinery such as cranes, bulldozers and cranes. They make up the most common kind of heavy equipment training. Usually, the rubber tire training involves the rubber-tired types of cranes, earth movers and end loaders. Heavy equipment training also involves using various rubber-tired vehicles like dump trucks, graders and scrapers. Training centers often include truck driver training for the different kinds of heavy equipment training.

The majority of heavy equipment machinery operate on diesel fuel, hence the fundamentals of diesel mechanics is a main part of heavy equipment training. Quite often, a course on the fundamentals of diesel mechanics is usually required of those training. Amongst the main objectives of the course are to be able to educate an operator on maintenance procedures and basic troubleshooting in the event of a problem with the equipment. Usually, this training saves a mechanic from being called out in the middle of nowhere just because a piece of machinery needs the addition of something minor like engine oil. Diesel mechanics for heavy machinery is an education all unto its own; therefore, extensive training is not often offered in the course book for the general training program.
