

## Kelowna Manlift Certification

Kelowna Manlift Certification - The Manlifts and Elevated Platforms course provides training on the rules, regulations and right application of safe operating procedures and work practices included in daily activities for those who work utilizing this equipment. The program has been designed for individuals who are actively involved in these activities or those who have a basic understanding of this equipment.

Aerial platforms and manlifts have become integral and common machinery in industrial settings in the past few decades. These machinery provide an easy way to lift staff near what must be done on a stable platform apparatus, enabling workers to carry out tasks with greater comfort and safety rather than being perched on top of scaffolding or ladders.

Like every other tool, manlifts are just safe if they are utilized properly. Since they lift employees above ground level or floor, accidents can occur easily and this could lead to serious injuries or death for both the manlift operators as well as any passerby who may not be lucky enough to be standing below.

Manlifts come in a variety of models. Nearly all fit into 1 or 2 categories: the scissor lift, which is capable of moving up and down and the articulating boom lift, that can move both horizontally and vertically.

### Protecting Staff

It is vital to provide proper training for you operators. Many companies that rent these machinery would provide on site training. Every worker who will be working on the machine or operating it has to receive training in safe operations. It is likewise vital that only those employees who have received training must be authorized to operate the controls. Communication rules and operating procedures should be clear. Thus, workers on the ground should not operate controls without the approval and knowledge of any employees inside the basket.

The workers that occupy the basket would be required to wear the proper fall protection gear that consists of a harness and lanyard. The fall protection connects to the manlift easily. The employee must ensure that she or he has made whatever adjustments needed to reflect the change in fall distance if there are changes in the height of the work area.

Manlifts need to be tested and inspected each and every day to make sure they are in safe operating condition. Prior to the machinery being utilized, any defects need to be re-checked and fixed.
